Introduction

In this assignment, I will review the website I created, evaluate the final product, and compare the final design to the original plan.

How the website is suitable for the intended audience and purpose.

My website is suitable for the intended audience because it has a user-friendly interface. It is also easy to navigate without getting confused. If you get stuck, you can go to the top of the webpage and find all of the internal links that show you where to go.

My website is great for its usability because each page follows the same template, so you already know what to expect when you visit a page. This makes the website look more complete, as each page perfectly matches the others.

My website suits the purpose because each web page provides information about every phone that someone is likely to buy. Any Information not included can be easily found through external links. I think that a good part of my website is how easily much-needed information can be found simply by scrolling through the links at the top of the page.

My website also includes a table for sim cards that are needed immediately after buying a mobile phone. This table includes lots of information and gives the user plenty of great options when trying to purchase a sim card for their new mobile phone.

How the website meets the needs of purpose and user requirements & Evaluation of the design

- target anyone who is interested in buying mobile phones.
- load easily and be quick and easy to navigate (consider using menus).
- contain at least eight linked pages.
- contain at least one table.
- have a consistent use of text, colour schemes and page styles in all of the web pages.
- be interesting and have at least four suitable, different original and/or ready-made, embedded multimedia/digital assets, e.g. digital animation, digital graphics, digital audio, digital video.
- contain some interactive features, e.g. a feedback form to collect customer enquiries.
- have at least two external hyperlinks to other interesting web pages.
- be internally linked, with easy-to-navigate menus.
- contain a link to an online forum.

My website meets the user requirements because I followed a detailed checklist so I was certain that I addressed all the criteria. By reviewing each point on the list, I was able to verify that every aspect of the website aligns with the user's expectations. This thorough approach helped guarantee that the site fulfills its intended purpose and provides a seamless user experience.

- My website targets people looking to try and buy mobile phones and provides useful information so they know what phones would be good for them.
- Each page on my website loads quickly and doesn't slow your browsing.
- My website contains nine web pages which means you can easily find a good amount of information
- my website uses the same colours, and fonts and every page is laid out similarly to each other meaning that my website is easy to use. You know what to expect on each page.
- My website is interesting as it uses lots of images to draw the viewer's attention. My

website also uses lots of hyperlinks to keep the viewer interested.
- My website has interactive features including a feedback form and an online forum so the user has lots of things to see while looking through my website.
- My website uses lots of external hyperlinks to give the user lots of information provided by professionals on the subject and also an easy way to the websites where you can purchase the selected mobile phone.
- My website uses lots of internal links to find your way quickly and easily around the website using the bar at the top of each page where you can find all the links to give a user-friendly experience.
- My website contains a link to an online forum on each webpage that you can easily find at the bottom of each page to provide a user-friendly experience.

Phone accessories

Homepage : Apple iPhones : Android : Google Pixel : Samsung Galaxy : Huawei : Motorola : Phone Accessories : Sim Cards

Airpods are brilliant to pair with an apple iPhone that you may consider purchasing for a low price. Airpods are a brilliant pair with iPhones as they can link easily and include great comfort and sound quality. If you will ever need a new pair of earphones then Airpods are the way to go.

A phone case is a necessity for when you first buy a phone. This is crucial because when you buy a phone of any kind if you drop it or damage it in any way then you will very quickly lose lots of money whereas if you get a phone case then drop your phone you will be less likely to break your brand new phone.

All mobile phones usually come with a charger but we always find that charger to be slow and easily breakable so us here at mobile world station suggest you invest in a highly durable super fast charger for less than £10.

Some people decided they didn't like apple watches when they got one of the older ones, Since then Apple realised their mistakes and the apple watch has improved ever since. Whether its for health, safety, fitness or connectivity the apple watch has got you covered for everything you will need.

Samsung Galaxy

Homepage : Apple iPhones : Android : Google Pixel : Samsung Galaxy : Huawei : Motorola : Phone Accessories : Sim Cards

The Galaxy A15 is incredibly cheap being available from less than £130 and comes with a great 90hz refresh rate, brilliant chipset, lots of storage and is overall a great phone to use because of its user friendly interface. if you have a really low budget then this phone is definitely one of the greatest phones you will find.

Galaxy Phones are undoubtebly the most popular phone designed by android as millions of them are sold each year. Galaxy phones have some of the best cameras on the market with up to 100x zoom. The new Samsung Galaxy does definitely have some of the best parts it can have and this is shown by the performance of the device and how smooth it can run.

The Galaxy A35 is definitely one of the best budget smart phones on the market, the a35 is relatively cheap and has an unbeatable display, one of the best chips you will find and loads of storage. If you have a small budget then worry no further as this is the phone for you.
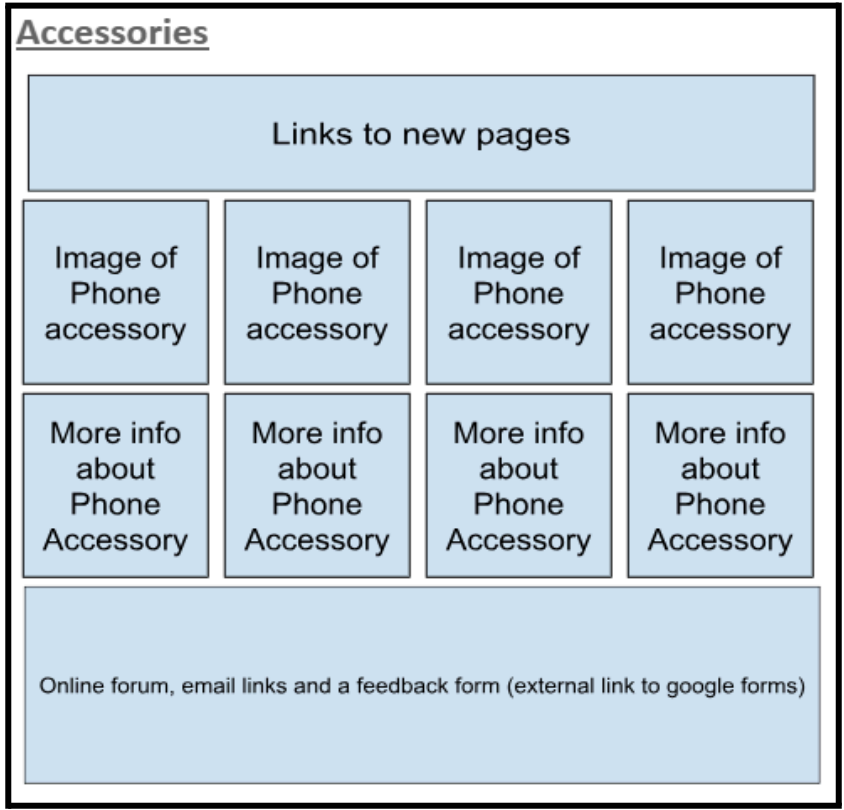

The Galaxy Z-Flip is an incredibly interesting phone with folding capabilities and some brilliant components and a durable design ensuring that your phone will be protected however it flips or folds. This phone isn't the best choice for your main phone but it has got a lot of entertaining features and sneaky tricks.

Galaxy have created a great company that sell a lot of fascinating products and have a lot of brilliant devices guaranteed to last you for years if you want to find their website then you can check Here

If you need to contact us for any problems that you may have with the website we have multiple ways of doing that
You can email us here

You can find our online forum here

You can find our feedback form here

These screenshots show that when designing my website I successfully planned my storyboard and how I managed to stick with my original plan. When designing my website I considered changing the storyboard but I decided against this in the end as I believed that my original plan would be easier to use and also look nicer as the pictures look neat because they are in a row.

Include 3 recommendations for further improvements to the website.

I think that my website can be improved in numerous ways as I think that I have done a good job but it can be improved.

Adding some more interactive features to my website could help keep some people more interested in my website and also help better display what some of the mobile phones look like. I believe that adding some videos to my website would make it look a lot nicer and if I was to add one video to each page then my website would be able to give more information while still looking neat.

I originally planned on adding coloured titles but due to time constraints I wasn't able to even though I was unable to do this I don't find it to be that much of a problem as not having different coloured titles helps with accessibility. Even though it does help not having coloured titles I believe that adding them would have been better as it would have looked much nicer and still usable by nearly everyone.

I think that if I decided on adding a banner then it would have looked much better than just having the top empty. A simple banner at the top of my website would have made it look much more complete and a lot nicer. If I had time then I would have considered adding a banner onto my storyboards to consider how it looked and then afterwards depending on what it looked like to add it onto my website.

Feedback about my website

When designing my website I was hoping to get feedback from some potential users about how the website was designed and how it could be improved and then unless I had a reason not to I could then work on that feedback making a website that is better for people to use. Unfortunately due to the strict deadline of designing this website I wasn't able to find the time to do this.
